Passenger Demand

- Current passenger demand is enough for only one operator. Generally, demand of less than 100,000 passengers per year is unlikely to sustain two airline operators.
- There was a significant reduction in passenger demand during the COVID-19 pandemic in 2020. The low demand during these unprecedented times resulted in a sharp fall from 2018/19 to 2019/20 with a decrease of almost 23% for both Monkey Mia and Carnarvon, demonstrated in the below graph.
- The 2020/21 financial year has seen a recovery of the Monkey Mia route with a total of 4,512 passengers (similar to pre-COVID), but a slower recovery of the Carnarvon route with a total of 18,160 passengers.

Air Service Performance

On Time Performance (OTP)

When a flight departs/arrives within 15 minutes of the scheduled time, it is considered to be on time. This is an airline industry benchmark. The OTP of flights can be affected by controllable or uncontrollable circumstances causing the flight delays.

Controllable Delays

Controllable delays are those circumstances that cause flight delays that are within the airline's control and the airline has capacity to rectify potential delays.

Uncontrollable Delays

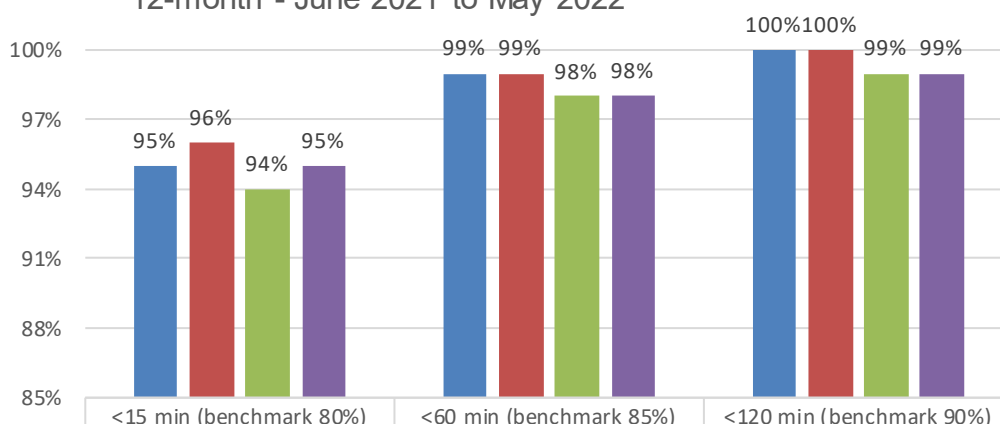

Uncontrollable delays are those circumstances that cause flight delays that are beyond the airline's control and capacity to rectify, such as bad weather conditions, airport congestion and air traffic control delays by third parties at airports.

OTP Benchmarks

Under the deed of agreement with the State, Rex is required to meet or exceed the following:

- 80% controllable OTP for aircraft departures and arrivals within 15 minutes of scheduled departure and arrival times;
- 85% controllable OTP for aircraft departures and arrivals within 60 minutes of scheduled departure and arrival times; and
- 90% controllable OTP for aircraft departures and arrivals within 120 minutes of scheduled departure and arrival times.
